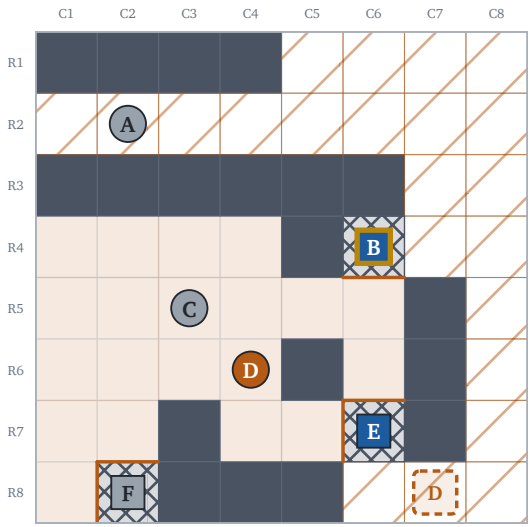
The same fork, two protocols, the same model

six players, S4 board 3, Qwen3.8 in both; same objects, starts, targets and victim

(a) none, move 46: B declares done

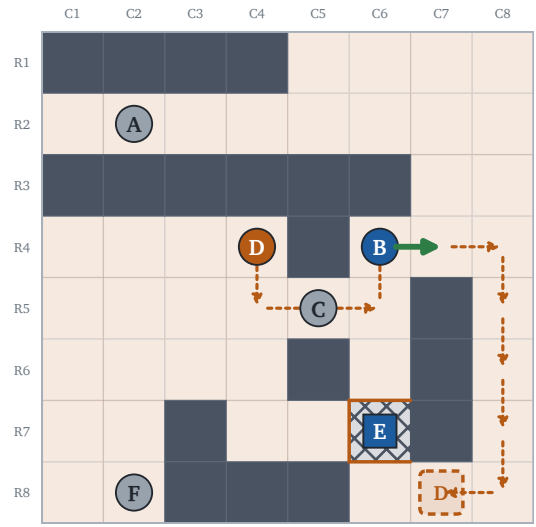


B `move 46 · action`

done: all my objects are placed

D can no longer reach R8C7. The team plays 15 more moves and the episode ends on a repeated board: lost.

(b) hybrid, move 49: B steps off its target



B `move 44`

I'll take (R4,C6) now and stay there … I'm finishing my object this turn and will declare done next.

B `move 49`

I'll start clearing D's route by moving right to (R4,C7).

B `move 53`

keeping (R4,C6) and (R4,C7) open for D's C8 corridor. … This avoids trapping D behind the C6 wall.

D reaches R8C7 on move 79, the last of the episode: won.

declared done: object frozen, cell walled · cells D loses to B's done · D's route, open while B can move · where D can still get to · D's target · B's move off its target
