One turn, as the player receives and answers it

T2 of the same episode · the board panel is not the true board: it is what the listing to its left says, which is all Player B has

game master → Player B

```
Player A says: …My A target is (R5,C3), so
please clear that cell for me; I can adapt
once your X moves. PLAN: move D from (R2,C1)
to (R1,C5) — REQUEST: clear R5C3 for A

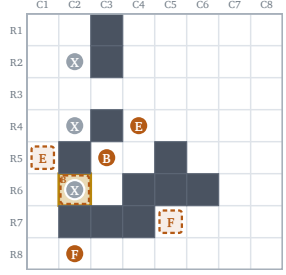
CURRENT BOARD:
Objects: X@R4C2 B@R5C3 X@R6C2 X@R2C2 E@R4C4
       F@R8C2
Walls: R1C3 R2C3 R4C3 R5C2 R5C5 R6C4 R6C5
       R6C6 R7C2 R7C3 R7C4

GOAL BOARD:
Targets: B->R6C2 E->R5C1 F->R7C5

Your turn. Respond with:
message: <your message to your teammate>
move: <OBJECT> <DIRECTION>

OR, if ALL your objects are at their target
       positions:
message: done
done: all my objects are placed
```

what that listing means



Player B → game master (DeepSeek-V4-Flash)

```
message: Moving B down to R6C3 frees R5C3 for
  your A. Please move X at R6C2 left to R6C1
  so B can finish at R6C2. Then A can take
  the left column and row 3 to R5C3; I'll
  keep E at R4C4 until that corridor is
  clear, and send F along R8 to R7C5. PLAN:
  move B from (R5,C3) to (R6,C2) — REQUEST:
  move X from (R6,C2) to (R6,C1)
move: B down
```

The X it asks about is Player A's C.
Player B cannot know that, and does not need to:
the cell address is enough to refer with.

● Player B's own object ● a teammate's object, unidentifiable □ Player B's target (teammate targets are omitted) ■ wall
